

Portable

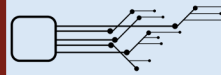

176-pound compact unit - security agent on wheels that is quick to deploy and will identify persons or vehicles and give warnings based on your exact parameters.

Cost-Effective

Finally, a solution to multi-guard sites that are hard to staff or areas of concern where you don't have video surveillance. Also, S3s enhance and help protect human security team, if needed.

Smart

AI technology able to discern between the normal environment and intruders to your restricted area.

Smart Sentry Stations

S3s specialize in human sensing, perimeter crossing and appearance-based alarms, even license plate recognition.

S3s deliver applicable recorded messages and have 2-way conversation capabilities.

S3s are powerful, adaptable, enduring and programmable. They are all-seeing, detail-oriented and responsive.

S3s provide 360-degree coverage, 24/7, wherever they are stationed.

Deployment examples include: warehouses, corporate buildings, small businesses, construction sites, parks, satellite plants, HOAs/communities, swimming pools and more.

When COVID hit, we were faced with a new challenge: how do we keep people safe when we have to deal with proximity restrictions and reduced personnel? It wasn't the first time military-trained professionals had to come up with a solid solution quickly. We partnered with the best in engineering and manufacturing to create the S3: Smart Sentry Station.

We designed S3s not only to fill the immediate need, but to add another layer of security to typical protocol. Our R&D refinements over the last 2 years have already shown us just how much they can handle -- around the clock, in any weather.

S3s identify objects and events, sending instant alarms based on your specific rules and unusual activity detection. Our powerful cloud-based AI video management system (VMS) is equipped with integrated learning abilities. Each S3 is a compact, fully portable surveillance machine.

Deterring. Securing. Protecting.
We've got your back.

Smart Sentry Stations

- Mast fully deploys to over 8 feet tall
- Weight: 176 lbs
- Solar connections and charging for 200+ watts
- Plugin available for 110v power options
- Extended battery booster connection for up to 7 days of battery life without solar/wind back up
- Local Wi-Fi or cellular connectivity
- No port forwarding; no software to install
- Cloud-managed data; no network connection needed
- Customizable recorded messages for specific events/actions
- Remote monitoring for power and network stability
- Security LEDs with multiple on settings, AI triggered for specific events/actions
- Cameras: over 13 million pixels covering 360-degree panoramic views
- Heat mapping
- Optional visitor management
- Optional access control
- Optional VOIP/SIP integration

Deter. Secure. Protect.
